MATH 417: Introduction to Abstract Algebra (3 credit hours)

Course description

Math 417 is an introduction to abstract algebra. The main objects of study are groups, which are abstract mathematical objects that reflect the most basic features of many other mathematical constructions. We will also study rings and fields and other abstract mathematical objects, which can be thought of as groups with additional structure.

Prerequisite: Either MATH 416 or one of MATH 410, MATH 415 together with one of MATH 347, MATH 348, CS 374; or consent of instructor.

Course Objectives

The goal of the course is to introduce students to abstract mathematical thinking through the study of these simple, beautiful mathematical constructions, and to explore the relationship to other areas of mathematics.

Course Content

Format

- This course features video lectures from the UIUC Spring 2016 course taught by Professor Chris Leininger and includes online lecture notes via Moodle. No additional textbook has to be purchased.

- These additional materials may be used for reference: Goodman, "Algebra: Abstract and Concrete" available at http://homepage.divms.uiowa.edu/~goodman/algebrabook.dir/algebrabook.html and Fraleigh, "A First Course in Abstract Algebra"

- Students must be able view assignments online, write out solutions, then scan or take a photo of their written work and upload it to Moodle to meet set deadlines.

- This course requires multiple exams that may be taken online.
